## Wireless Hacking and Countermeasures

### Part of the Sec-1 Training Programme

#### Course Overview

Wireless Hacking and Countermeasures is an in-depth course, designed for any IT professional with an interest in wireless networking. The course is essential for anyone currently using wireless or looking to implement a wireless network. Utilising 802.11x wireless equipment, the course will provide attendees with the skills required to securely implement wireless networks, to test their network regularly for insecurities, and to defend them against malicious attacks.

#### Course Outcomes

Upon completion of this course you will be able to:

- Perform a wireless vulnerability assessment and exploit discovered vulnerabilities
- Gain privileged access to wireless systems using the latest hacking techniques
- Interpret the results of the tools used during the assessment
- Eradicate discovered vulnerabilities

#### Key Benefits

This training module provides attendees with the following benefits:

- Gain the skills and tools to assess wireless infrastructure
- Receive The Assessment Tool Kit
- 8 CPE credits

#### What do our other clients say about us?

*I thoroughly enjoyed my day with Sec-1; the live hacking was a real eye opener. It showed how online tools are readily available for hackers to use, which has led me to take preventative steps to ensure this doesn't happen to our network. Overall an informative day which I would actively recommend to others...*

Paul Bargewell  
Charnwood Borough Council

#### Accreditations

## Who Should Attend

This course is relevant to attendees who are interested in or responsible for wireless network security including IT Professionals, IT Managers, IT Security Officers and Wireless Network Managers.

## Prerequisites

Attendees should have knowledge of the following:

- Administrating a wireless network
- Administrating Windows
- TCP/IP

## About the Sec-1 Training Programme

Sec-1 has developed a training programme to provide IT professionals a structured approach to learning.

The training programme is constantly under development.

Other courses include:

Ethical Hacking and Countermeasures and,  
Securing Web Applications
